PIÑAVIDA

Cloud migration from on premises servers to the Cloud

Challenge

Our client had been utilizing their current operational database for the last 7 years of operation.

Since inception the business had become a multi-site operation with sites in the UK, Belgium and India. The two year modernization program was to enable the business to scale to incorporate a new facility and therefore efforts to mitigate latency and ensure data being stored and retrieved efficiently were required.

Solution

Pina Vida worked directly with the customer infrastructure team to propose and architect a database in the cloud ensuring integration with Azure Active Directory.

A three phased approach was agreed with senior management and executed over a 6 month period. PV consulted in the prioritization of migration tasks, and the development of a hub-spoke based framework with API calls to offsite systems.

Let's build something great together

Lots of companies can develop software for you.

Few can truly deliver the results you actually want.

Our Delivery-First approach means
your projects are guaranteed to succeed

So, if you'd like an honest discussion about
a new or ongoing project that is 100% focussed
on quality delivery, we'd love to talk to you.
